Experience

EDMO | *Associate Software Engineer*

Apr 2025 – Present

- To unify inbound student-support calls across telephony platforms, engineered a call-routing layer in **Nest.js** middleware streaming Genesys AudioHook audio into **VAPI** voice agents, now serving **3,000+** calls per day in production.
- To eliminate context collection on escalation, built a conversational-intelligence handoff mapping **VAPI** conversation variables to program-linked **Genesys** queue IDs, routing students to the right advisor.
- To streamline student query resolution for NYU's Office of Global Services, launched a **RAG** web chatbot backed by a **pgvector** knowledge base auto-refreshed from 300+ scraped university pages, achieving **82%** accuracy in phase 1.
- To handle large video uploads without blocking the UI, designed a fault-tolerant, event-driven pipeline using **Apache Kafka** and **Google Cloud Storage** for async processing, eliminating upload bottlenecks with a decoupled architecture.
- To digitize course-equivalency evaluation, developed a Transfer Credit Evaluation system applying **Amazon Textract OCR** and document intelligence to score transcript-to-course mappings, reducing admissions workload.

Sarvm.ai | *Backend Developer Intern*

Feb 2025 – Apr 2025

- To remove corrupted shop data, developed a Node.js and **PostgreSQL** audit script verifying QR scanner mappings and phone numbers across **5,000+** records, cutting invalid database entries by **25%** and improving data integrity.
- To enable faster subscription-based search and filtering, created a REST API syncing user subscription updates to **Elasticsearch** in real time, ensuring consistent data availability and improved query performance across the platform.

Education

Chandigarh University | *B.E., Computer Science and Engineering*

2021 – 2025

Mohali, Punjab

Projects

Wealth One 📄 | *Java, Spring Boot, TypeScript, Next.js, Docker*

Mar 2025

- To aggregate investment data across platforms, integrated CoinDCX, Upstox, and CoinGecko APIs consolidating real-time market data and user holdings, enabling portfolio visualization through interactive pie charts.
- To deliver personalized investment guidance, embedded **Gemini 2.0** as an AI assistant for mutual-fund analysis over live market data and portfolio performance, providing actionable real-time insights for users without manual research.

AI Interviewer 📄 | *TypeScript, Nest.js, MongoDB, OpenAI*

Aug 2025

- To automate technical screening, built a **Nest.js** platform with **JWT** auth and role-based access control, running **OpenAI** question generation, scoring, and result emails across **10** services.
- To personalize each interview, designed a resume-parsing pipeline that extracts candidate data to generate role-specific questions, exposing real-time speech and chatbot endpoints over **MongoDB** for a conversational mock interview.

Technical Skills

Languages & Core: TypeScript, Java, C++, Data Structures & Algorithms, Object-Oriented Programming.

Backend & Web: Node.js, Nest.js, Spring Boot, Next.js, RESTful APIs, Apache Kafka, Elasticsearch.

Databases: PostgreSQL, pgvector, MongoDB, SQL, Prisma ORM.

AI & Voice: VAPI, Genesys AudioHook, RAG, OpenAI, Gemini, Amazon Textract.

DevOps & Architecture: Microservices, Docker, Kubernetes, Google Cloud Platform (GCP), Git, Linux, Sentry.

Achievements

- Won **First Prize** at the iSchoolConnect hackathon for an AI interviewer platform, earning **Rs. 50,000** 📄
- **Hack Overflow 4.0: Runner-up** among **80+** teams with a 24-hour prototype, earning **Rs. 60,000** 📄
